

# ANNUAL REPORT 2023

# LETTER FROM THE FOUNDER & CHAIR

It's hard to believe that it has been a little over six years since we launched Engineers & Scientists Acting Locally. We remain dedicated to our mission to increase local civic engagement by people with backgrounds in science, technology, engineering, and mathematics (STEM). Thanks to an incredible team, this year, we have evolved and expanded in ways I could not have imagined.

We have strategized and fundraised over the last few years to support ESAL's programmatic work and to hire our first staff member. Before March of 2023, ESAL was an entirely volunteer-run nonprofit. We are thrilled to have expanded our capacity by welcoming Taylor Spicer to serve as ESAL's first managing director. In this role, Taylor will use her civic engagement, nonprofit board service, and higher education experience to enhance ESAL's organizational, operational, and volunteer management capabilities. Taylor's hiring signifies a new phase of maturity for the organization and a harbinger of great work to come.

This year, we also launched our new website to better highlight our content and make it more navigable. This marks a structural change for ESAL that supports our core values of education and awareness-raising. Volunteers spent countless hours behind the scenes organizing and presenting ESAL's many resources in accessible and purposeful ways. Now, our [Local STEM Database](#), [Local Engagement Map](#), [original articles](#), [past events](#), [workshop information](#), and much more can be easily searched and used by our audiences.

We begin almost every presentation at ESAL with the anonymous quote, "Decisions are made by those who show up," because we have experienced and witnessed first-hand the disproportionate ripples STEM professionals make when we show up in our local communities. Involving ourselves more deeply in the places we live and work—especially by listening to the needs of community members and policymakers—can reap personal, societal, and even professional benefits.

In the year ahead, ESAL will continue to develop broad-reaching programming and content. Through an upcoming virtual event, we will explore how filling gaps in local data allows municipalities to understand social realities and propose data-based policies and practices that help build more inclusive and supportive communities. ESAL members are also furthering our educational mission through insightful and diverse panels at many in-person national conferences and annual meetings throughout the year. In this post-pandemic period during which local and political contexts seem ever-changing, ESAL is dedicating resources to a strategic planning process. We see the value of reflecting on how we can best serve the needs of engineers and scientists seeking to make an impact in their communities both today and in the future. We aim to share a refreshed and aligned vision for the next phase of our organization in the coming year. We are humbled and excited to continue in this purposeful work with current and new partners, allies, supporters, and champions.

Sincerely,

A handwritten signature in black ink that reads "Arti Garg".

**Arti Garg, PhD**  
*Founder and Chair*

# JUSTICE, EQUITY, DIVERSITY, & INCLUSION (JEDI) COMMITMENTS

**ESAL carefully considers diversity in all of our content and programming and strives to feature people from all geographic backgrounds, at every career stage, with expertise across the breadth of STEM disciplines, having differing abilities, and who have a diverse set of identities, including racial, ethnic, religious, cultural, gender, and sexual orientation. ESAL has committed to:**

- *Incorporate discussion of JEDI issues in STEM into all of ESAL's programming.*
- *Continue to use a JEDI lens for our issue-focused programming and content.*
- *Proactively conduct outreach and seek partnership opportunities with scientific societies and organizations for groups that have been historically marginalized in STEM.*

- *Conduct a quantitative internal review of ESAL's organizational diversity.*
- *Through our programming and content, highlight the historical and current intersections between Indigenous people and the mainstream U.S. STEM community, without shying away from controversy, particularly with respect to local ecosystem and land rights issues.*

**This year, ESAL increased our issue-focused content that uses a JEDI lens and increased our programming that incorporates or centers JEDI, especially in regard to Indigenous peoples, within the work of professionals with STEM backgrounds. Learn more about last year's related work in our annual assessment [here](#).**

June 2023 Newsletter

This month, as we celebrate Pride and the Juneteenth holiday, ESAL reviews the commitment we made to promote justice, equity, diversity, and inclusion in our broader advocacy for local engagement. Chair Arti Garg [evaluates](#) how the organization has measured up against those goals over the past year.

The latest story on ESAL's blog talks to the leaders of a Thriving Earth Exchange project based out of Chicago, which aims to "amplify climate narratives in migrant communities." And if you missed the virtual panel last month, you can now find a recap of the event, [Protecting Wetlands for Healthy Communities and Ecosystems](#).

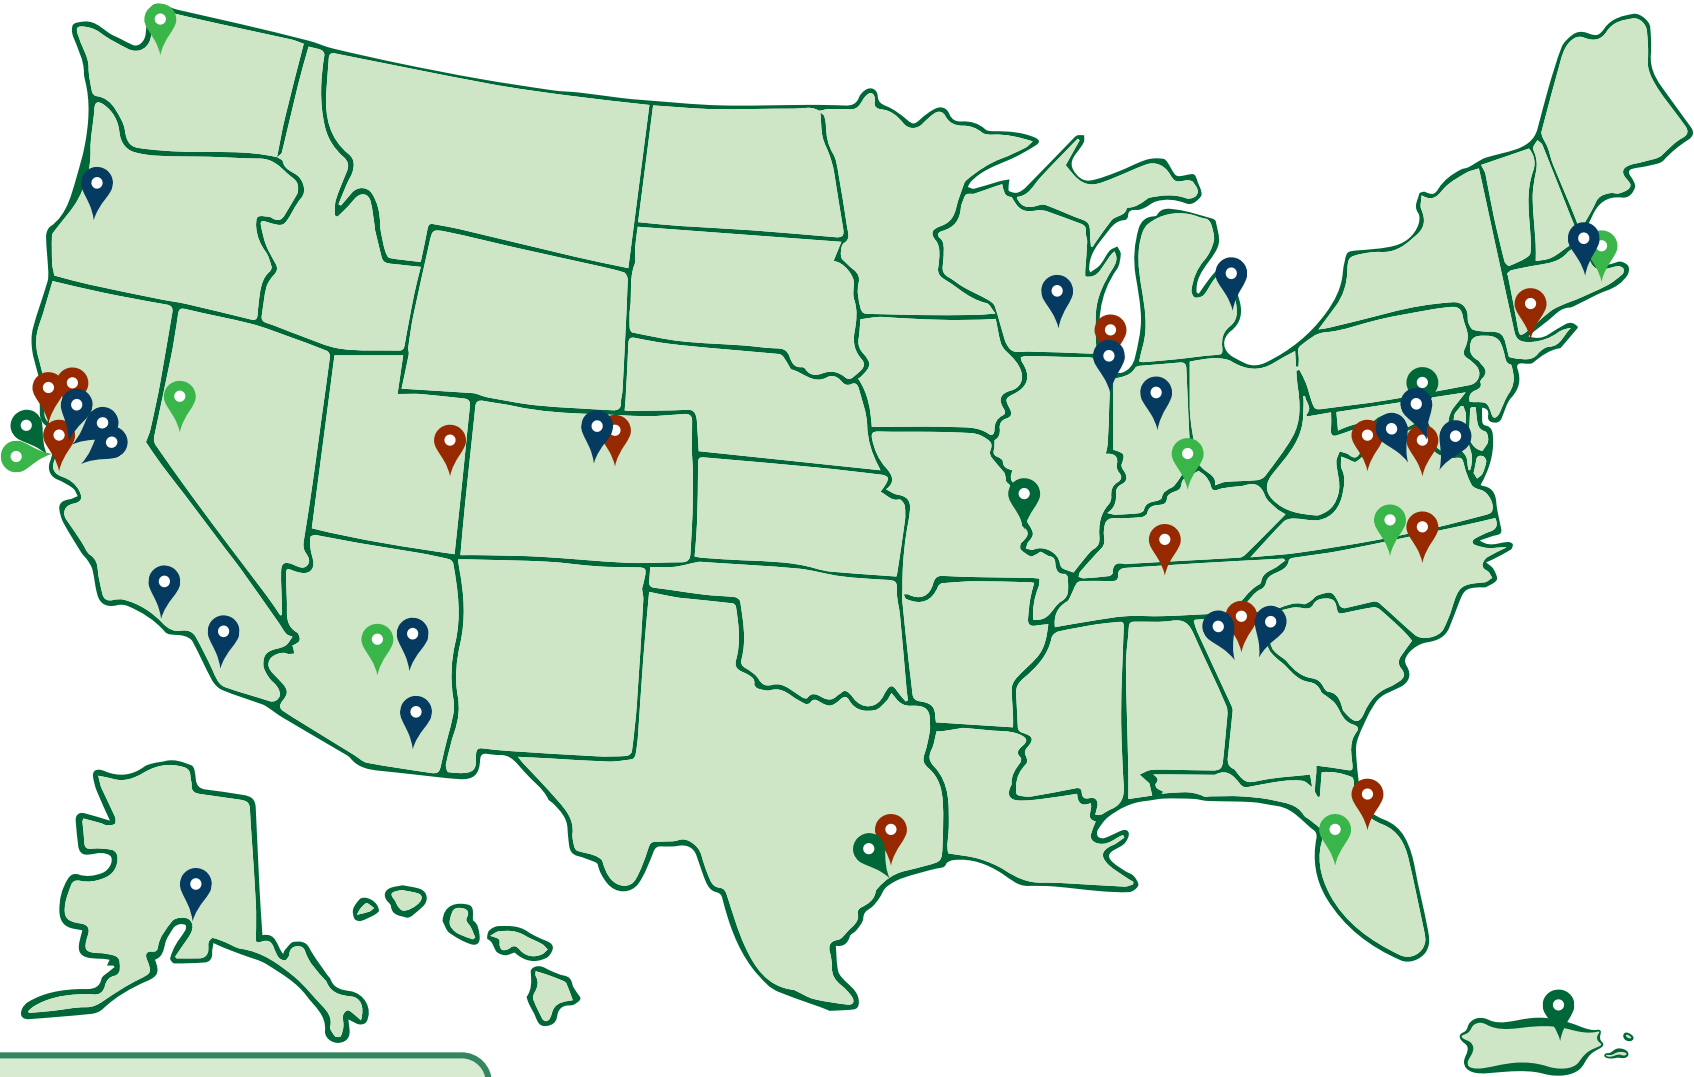

Check out ESAL's Youtube channel for a fresh introductory video on [Getting Involved in Public Policy as a Scientist](#).
